An

Industrial Training Report on

WEB DEVELOPMENT

At

Blue Space Technologies

Submitted in partial fulfillment of the requirements for

the award of the degree of

Bachelor of Technology

in

Computer Engineering

(Session 2023-24)

Submitted to:	**Submitted by:**
Mr. Shirish Mohan Dubey	**Samidha Bafna**
Assistant Professor	PCE21CS150
Coordinator(Industrial Training)	5CS-C

DEPARTMENT OF COMPUTER ENGINEERING

POORNIMA COLLEGE OF ENGINEERING, JAIPUR

RAJASTHAN TECHNICAL UNIVERSITY, KOTA

SEPTEMBER, 2023

DECLARATION

I hereby declare that the work which is being presented in the **Industrial Training** report titled **web development** in partial fulfillment for the award of the Degree of **Bachelor of Technology** in **Computer Engineering** and submitted to the Department of **Computer Engineering**, **Poornima College of Engineering, Jaipur**, is an authentic record of my own work carried out at TechieNest **Pvt. Ltd.** during the session 2023-24.

I have not submitted the matter presented in this report anywhere for the award of any other Degree.

Signature of the Student
Name: Samidha Bafna
Reg. No. PCE21CS150
Place: Jaipur
Date:

Dr. Mahesh Bundele

BLUE SPACE

Samidha Bafna

Intern

Date: 16 September, 2023

This is to formally certify that Ms.Samidha Bafna A student from the esteemed Poornima College of Engineering Jaipur, pursuing B.Tech , has successfully completed an internship in **Full Stack Web Development** at Blue Space, Jaipur.

The internship spanned a period of 45 days, commencing on 1 August 2023 and concluding on 15 September 2023.

She has successfully completed the Internship under the supervision of Mr. Harshit Meena, Project Manager, Blue Space, Jaipur.

We here by acknowledge her efforts and accomplishments during her tenure with us and wish her every success in her future endeavors.

For Blue Space Professionals Pvt. Ltd.

Authorised Signatory

Harshit Meena
Project Manager

Yashkrit Marwal
Department Head

ABSTRACT

The main objective of this internship was **WEBSITE DESIGN AND DEVELOPMENT**. Several programming languages that are in use to develop a web-based application or software. Some of them are only used for the **UI** and the frontend of the application, some are used for the backend design of the software. For example **- HTML3, HTML4, HTML5, CSS, Bootstrap Framework** etc. are some programming languages to develop the frontend of an application. **Node js** etc are used at the backend. Nowadays there are also some framework's that use vastly. Frameworks are basically structured programming by using **Model, View,** and **Controller**. It is also called as MVC. If we develop web-based application that is very useful for us because we can access it from anywhere of the world. It is very helpful for our daily life. That is why I choose subject of my report is **"WEBSITE DESIGN AND DEVELOPMENT".** Learning in **Blue Space Technologies** added huge experiences in my upcoming career. This report takes us through all the details of **WEBSITE DESIGN AND DEVELOPMENT** knowledge and experience gathered during this internship period

Dr. Mahesh Bundele

CHAPTER 1

INTRODUCTION

1.1 About company

Blue Space Technologies is technology service provider and student-employee training organization. The soul mission is to facilitate education, research, and development on legacy and emerging technologies. In a very short span of time our team has successfully delivered impactful workshop & training services. We have also successfully completed engineering and R&D on diverse range of projects belonging to military, universities, and private companies all over India we are renowned for our R&D services and unique educational content. In the vast growing technical era, we are rising with a mission to expand the set boundaries of "Blue Space Technologies " to explore, invent and innovate!

1.2 Training Starting Date: August 1 2023

1.3 Training Ending Date: September 15 2023

1.4 Training Duration: 45 days

<div align="center">**CHAPTER 2**

TECHNICAL TRAINING PLATFORM</div>

2.1 About Blue Space Technologies

Blue Space aims at making quality technical education accessible to learners across the country. Blue Space works the cornerstone for budding technocrats and stepping stone for working professionals, enabling India with technology creator

2.2 Why Blue Space Technologies???

Get a head start by adding to your Web Development tool chain start creating our own professional web applications. This course will teach us the tools engineering teams use to make their code portable across browsers, optimized for loading, and efficiently served to users. These tools are used by most companies, but usually must be learned.

2.3 Take-Away Skills

• To learn build tools are and why professional engineering teams use them

• Learn to use common tools, concepts, and processes we will need on the job

• Learn build tools create code that is optimized for loading and portable across browsers

• Learn to add many types of resources easily and efficiently into a project like HTML, CSS, JavaScript, images, fonts, and more

• Learn to set up these tools for your existing projects

2.4 Conclusion

The Summer Industrial Training is to empower students with Industrial Knowledge in the domain of training. Each course content has been according to the current Industrial needs and help to convert their theoretical knowledge and fundamentals into practice and innovate new ideas and explore it. It helps me to visualize things before working on it along with an exciting environment

CHAPTER 3
OVERVIEW OF TECHNOLOGY LEARN

3.1 About web development

Web development is the work involved in developing a website for the Internet (World Wide Web) or an intranet (a private network).[1] Web development can range from developing a simple single static page of plain text to complex web applications, electronic businesses, and social network services. A more comprehensive list of tasks to which Web development commonly refers, may include Web engineering, Web design, Web content development, client liaison, client-side/server-side scripting, Web server and network security configuration, and e-commerce development.

Among Web professionals, "Web development" usually refers to the main non-design aspects of building Web sites: writing markup and coding.[2] Web development may use content management systems (CMS) to make content changes easier and available with basic technical skills.

For larger organizations and businesses, Web development teams can consist of hundreds of people (Web developers) and follow standard methods like Agile methodologies while developing Web sites. Smaller organizations may only require a single permanent or contracting developer, or secondary assignment to related job positions such as a graphic designer or information systems technician. Web development may be a collaborative effort between departments rather than the domain of a designated department. There are three kinds of Web developer specialization: front-end developer, back-end developer, and full-stack developer.[3] Front-end developers are responsible for behaviour and visuals that run in the user browser, while back-end developers deal with the servers. Since the commercialization of the Web with .
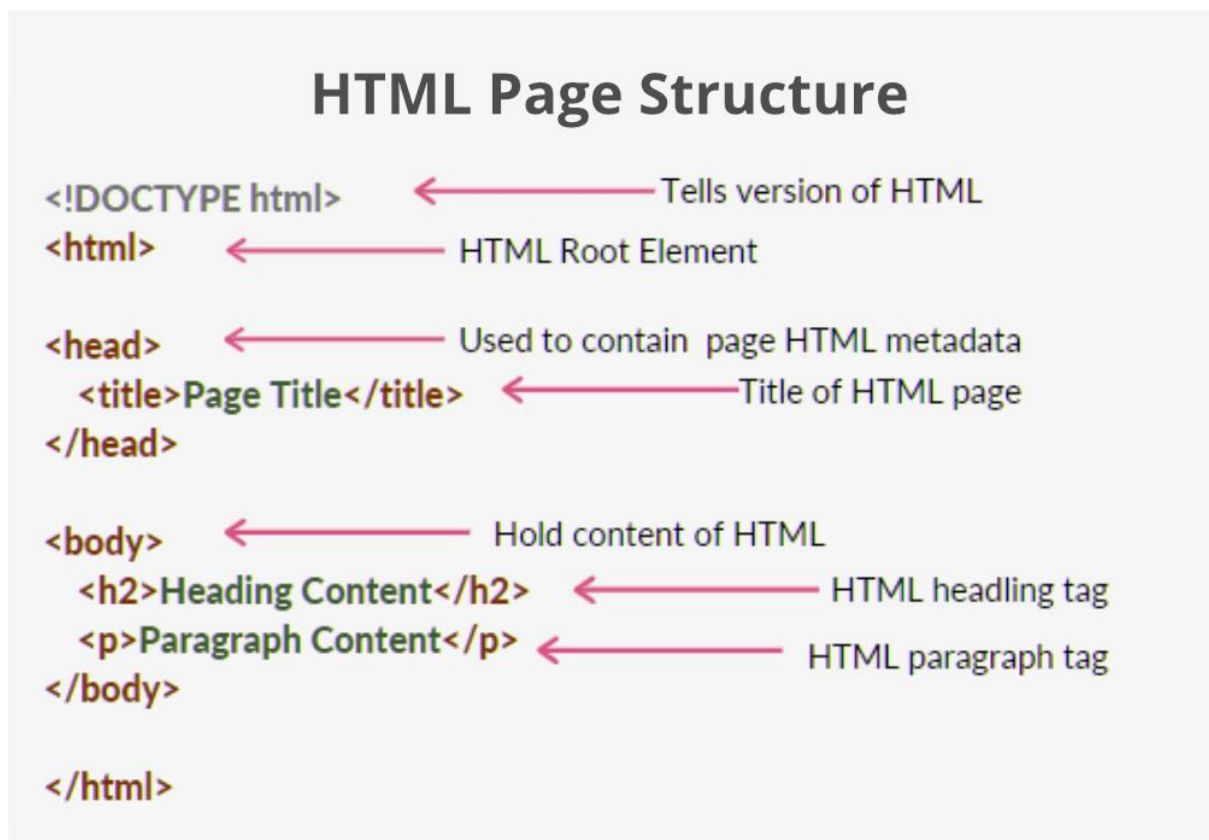

3.2 HTML

HTML stands for **Hypertext Markup Language**. It is used to design web pages using the **markup language**. HTML is the combination of **Hypertext** and **Markup language**. Hypertext defines the link between the web pages and markup language defines the text document within the tag that define the structure of web pages.

HTML is used to create the structure of web pages that are displayed on the World Wide Web (www). It contains Tags and Attributes that are used to design the web pages. Also, we can link multiple pages using Hyperlinks.

The basic structure of an HTML page is laid out below. It contains the essential building-block elements (i.e., doctype declaration, HTML, head, title, and body elements) upon which all web pages are created.

- **<DOCTYPE! html>** – A doctype or document type declaration is an instruction that tells the web browser about the markup language in which the current page is written. It is not an element or tag. The doctype declaration is not case-sensitive.
- **<html>** – This tag is used to define the root element of HTML document. This tag tells the browser that it is an HTML document. It is the second outer container element that contains all other elements within it.
- **<head>** – This tag is used to define the head portion of the HTML document that contains information related to the document. Elements within the head tag are not visible on the front-end of a webpage.
- **<body>** – The body tag is used to enclose all the visible content of a webpage. In other words, the body content is what the browser will show on the front end.

HTML Page Structure

```
<!DOCTYPE html>          ⟵              Tells version of HTML
<html>          ⟵          HTML Root Element

<head>          ⟵          Used to contain page HTML metadata
  <title>Page Title</title>   ⟵          Title of HTML page
</head>

<body>          ⟵          Hold content of HTML
  <h2>Heading Content</h2>   ⟵          HTML headling tag
  <p>Paragraph Content</p>   ⟵          HTML paragraph tag
</body>

</html>
```

3.3 CSS

CSS (Cascading Style Sheets) is used to apply styles to web pages. Cascading Style Sheets are fondly referred to as CSS. It is used to make web pages presentable.

Styling is an essential property for any website. It increases the standards and overall look of the website that makes it easier for the user to interact with it. A website can be made without CSS, as styling is MUST since no user would want to interact with a dull and shabby website. So, for knowing Web Development, learning CSS is mandatory.

Basic Format: It is the basic structure of CSS style of a webpage

```
body {
    background-color: light gray;
}
 h1 {
    color: green;
    text-align: center;
}
 p {
    font-family: sans-serif;
    font-size: 16px;
}
```

There are three types of CSS which are given below:

Inline: Inline CSS contains the CSS property in the body section attached with the element known as inline CSS.

Internal or Embedded :The CSS ruleset should be within the HTML file in the head section i.e

the CSS is embedded within the HTML file.

External :External CSS contains a separate CSS file that contains only style property with the help of tags attributes.

Tags for formatting a web page were never intended in HTML. HTML was established to define a web page's content.

HTML is used to define a structure of a web page whereas CSS is used to style the web pages by using different styling features.

HTML consists of tags inside which text is enclosed and CSS consists of selectors and declaration blocks.

CSS can be internal or external depending upon the requirement.

We cannot use HTML inside a CSS sheet but we can use

CSS has comparatively higher backup and support than HTML

Solves a big problem: Font, color, background style, element alignments, border, and size tags

had to be duplicated on each web page before CSS. This was a lengthy procedure.

Saves a lot of time: Because CSS style definitions are stored in external CSS files, updating only

one file can modify the entire website.

Provide more attributes: CSS gives more specific features for defining the look and feel of a website than simple HTML

Pages load faster: CSS does not require you to write HTML tag attributes all the time.

A tag's rule can be written once and applied to all instances of the tag. As a result, CSS uses

less code, resulting in speedier download times

Easier Website maintenance: CSS makes website maintenance much easier. If we need to make a global change to the file, we can simply alter the style, which will update all the elements on the web page.

Multiple device compatibility: We can use CSS with older language versions because it is compatible with them. . CSS makes it possible to optimize material for several devices.

Base for web development: HTML and CSS is the basic skill that every web developer should know. It is the basic skill that is required for building a website

Makes your website look attractive: A website that is dull and plain will not attract the user, so adding some style would surely make your website presentable to the user.

Makes the design come live: A web developer is responsible for making the design given to him as a live product It is used for styling to develop the design of the website.

Increases user experience of the website: A website with a simple yet beautiful UI would help the users to go through the website easily. It is used to make the user interface better.

More career opportunities: Since CSS is a basic requirement while learning Web Development, therefore there are abundant career opportunities for it. As a freelancer, you can land up too many projects.

3.4   Bootstrap

Bootstrap is a free and open-source tool collection for creating responsive websites and web applications. It is the most popular HTML, CSS, and JavaScript framework for developing responsive, mobile-first websites. Nowadays, the websites are perfect for all the browsers (IE, Firefox, and Chrome) and for all sizes of screens (Desktop, Tablets, Phablets, and Phones). All thanks to Bootstrap developers – Mark Otto and Jacob Thornton of Twitter, though it was later declared to be an open-source project.

Why we use Bootstrap?
- It is Faster and Easier way for Web-Development.
- It creates Platform-independent web-pages.
- It creates Responsive Web-pages.
- It designs the responsive web pages for mobile devices too.
- It is Free and open-source framework available on www.getbootstrap.com

How to use Bootstrap in webpage: There are two ways to include Bootstrap in the website.
1. **Include Bootstrap from CDN links:**
   Example:

```html
<!DOCTYPE html>
<html lang="en">

<head>
    <title>Bootstrap Example</title>
    <meta charset="utf-8">
    <meta name="viewport" content=
        "width=device-width, initial-scale=1">

    <!-- Bootstrap CSS library -->
    <link rel="stylesheet" href=
"https://stackpath.bootstrapcdn.com/bootstrap/4.3.1/css/bootstrap.min.css"
        integrity=
"sha384-ggOyR0iXCbMQv3Xipma34MD+dH/1fQ784/j6cY/iJTQUOhcWr7x9JvoRxT2MZw1T"
        crossorigin="anonymous">

    <!-- jQuery library -->
    <script src="https://code.jquery.com/jquery-3.3.1.slim.min.js"
        integrity=
"sha384-q8i/X+965DzO0rT7abK41JStQIAqVgRVzpbzo5smXKp4YfRvH+8abtTE1Pi6jizo"
        crossorigin="anonymous">
    </script>

    <!-- JavaScript library -->
    <script src=
"https://cdnjs.cloudflare.com/ajax/libs/popper.js/1.14.7/umd/popper.min.js"
        integrity=
"sha384-UO2eT0CpHqdSJQ6hJty5KVphtPhzWj9WO1clHTMGa3JDZwrnQq4sF86dIHNDz0W1"
        crossorigin="anonymous">
    </script>
```

```html
<!-- Latest compiled JavaScript library -->

<script src=

"https://stackpath.bootstrapcdn.com/bootstrap/4.3.1/js/bootstrap.min.js"

        integrity=

"sha384-JjSmVgyd0p3pXB1rRibZUAYoIIy6OrQ6VrjIEaFf/nJGzIxFDsf4x0xIM+B07jRM"

        crossorigin="anonymous">

    </script>

</head>

<body>

    <div class="container text-center">

        <h1 class="text-success">BRAND</h1>

        <p>A computer science portal for geeks</p>

    </div>

</body>

</html>
```

1.   Run on IDE
2.   **Download Bootstrap from getbootstrap.com and use it:**

Goto www.getbootstrap.com and click Getting Started. Click on the Download Bootstrap button.

•   A.zip file would get downloaded. Extract the zip file and go in the distribution folder. It contains   two   folders   named   as   CSS   and   JS.

```css
body {
    background-color: light gray;
}
h1 {
    color: green;
    text-align: center;
}
p {
    font-family: sans-serif;
    font-size: 16px;
}
```

There are three types of CSS which are given below:

Inline: Inline CSS contains the CSS property in the body section attached with the element known as inline CSS.

Internal or Embedded :The CSS ruleset should be within the HTML file in the head section i.e

the CSS is embedded within the HTML file.

External :External CSS contains a separate CSS file that contains only style property with the help of tags attributes.

Tags for formatting a web page were never intended in HTML. HTML was established to define a web page's content.

HTML is used to define a structure of a web page whereas CSS is used to style the web pages by using different styling features.

HTML consists of tags inside which text is enclosed and CSS consists of selectors and declaration blocks.

CSS can be internal or external depending upon the requirement.

We cannot use HTML inside a CSS sheet but we can use

CSS has comparatively higher backup and support than HTML

Solves a big problem: Font, color, background style, element alignments, border, and size tags

had to be duplicated on each web page before CSS. This was a lengthy procedure.

Saves a lot of time: Because CSS style definitions are stored in external CSS files, updating only

one file can modify the entire website.

Provide more attributes: CSS gives more specific features for defining the look and feel of a website than simple HTML

Pages load faster: CSS does not require you to write HTML tag attributes all the time.

A tag's rule can be written once and applied to all instances of the tag. As a result, CSS uses

less code, resulting in speedier download times

Poornima College of Engineering
ISI-6, RIICO Institutional Area
Sitapura, JAIPUR

Easier Website maintenance: CSS makes website maintenance much easier. If we need to make a global change to the file, we can simply alter the style, which will update all the elements on the web page.

Multiple device compatibility: We can use CSS with older language versions because it is compatible with them. . CSS makes it possible to optimize material for several devices.

Base for web development: HTML and CSS is the basic skill that every web developer should know. It is the basic skill that is required for building a website

Makes your website look attractive: A website that is dull and plain will not attract the user, so adding some style would surely make your website presentable to the user.

Makes the design come live: A web developer is responsible for making the design given to him as a live product It is used for styling to develop the design of the website.

Increases user experience of the website: A website with a simple yet beautiful UI would help the users to go through the website easily. It is used to make the user interface better.

More career opportunities: Since CSS is a basic requirement while learning Web Development, therefore there are abundant career opportunities for it. As a freelancer, you can land up too many projects.

3.5 Javascript

Javascript can be added in two ways:

Internal JS: We can add JavaScript directly to our HTML file by writing the code inside the <script> tag.

. The <script> tag can either be placed inside the <head> or the <body> tag according to requirement

External JS: We can write JavaScript code in other file having an extension .jess and then link this file inside the <head> tag of the HTML file in which we want to add this code.

Javascript is not only used for creating web pages but also creates millions of well-paid jobs all around the globe

Save your valuable time by enrolling in this *Fork Javascript -Self Paced Course* . In this course, learn the basics concepts of JavaScript like-functions & arrays in Javascript , working of JS Engines, and much more.

Once you are done strengthening your foundational skills with this course, it is recommended for you to start learning *Advanced Javascript-Self Paced Course* and start your JavaScript programming journey today!.

```
<script>
    // JavaScript Code
</script>
```

Are JavaScript and HTML the same?

• JavaScript is an advanced programming language that makes web pages more interactive and dynamic whereas HTML is a standard markup language that provides the primary structure of a website.

• JavaScript simply adds dynamic content to websites to make them look good and HTML work on the look of the website without the interactive effects and all.

• JavaScript manipulates the content to create dynamic web pages whereas HTML pages are static which means the content cannot be changed.

• JavaScript is not cross-browser compatible whereas HTML is cross-browser compatible.

• JavaScript can be embedded inside HTML but HTML cannot be embedded inside JavaScript.

What is JavaScript used for? Web pages with interactive elements: User interaction with web pages is enabled through JavaScript. On a web page, JavaScript has essentially no bounds.

• Developing online and mobile applications: For web and mobile app development, developers can employ a variety of JavaScript frameworks.

• Creating web servers and server applications: Aside from websites and apps, developers may use JavaScript to create simple web servers and Node.js to construct backend infrastructure.

• Game Development: Browser games can also be made using JavaScript. Beginning developers can use these to hone their JavaScript skills.

Is JavaScript easy to learn?

In comparison to other programming languages such as C++, Ruby, and Python, JavaScript is simple and easy to learn. The difficulty of learning JavaScript is primarily determined by your knowledge of other programming languages. Understanding HTML is the first step toward learning JavaScript. Because JavaScript is most used as part of a web page, which can only be learned through HTML.

What can we build using JavaScript ?

JavaScript is a widely-used programming language. Given below are some domains/products that can be built using JavaScript:

• Websites: JavaScript helps us to add behavior of our website. It helps users to interact with the website. For e.g., clicking on buttons, saving details, uploading details on the website, etc.

• Web Servers: We can make robust server applications using JavaScript. To be precise we use JavaScript frameworks like Node.js and Express.js to build these servers.

• Game Development: In Game Development industry, JavaScript is used widely. With the addition of HTML5 Canvas, it is now possible to make 2D and 3D games in JavaScript very efficiently.

• 3D Drawings: JavaScript in addition with HTML Canvas is used to make three-dimensional graphics.

• Mobile Apps: Mobile applications are the most popular modes of communicating these days. JavaScript also used to design mobile applications. There are many JavaScript frameworks using which we can make android, IOS, and hybrid apps.

• Smartwatch Apps: The popular smartwatch maker Pebble has created Pebble.js, a small JavaScript framework that allows a developer to create an application for the Pebble line of watches in JavaScript.

Why to learn JavaScript ?

JavaScript is the most popular and hence the most loved language around the globe. Apart from this, there are abundant reasons to learn it. Below is a listing of few important points:

• No need of compilers: Since JavaScript is an interpreted language, therefore it does not need any compiler for compilations.

• Used both Client and Server-side: Earlier JavaScript was used to build client-side applications only, but with the evolution of its frameworks namely Node.js and Express.js, it is now widely used for building server-side applications too.

• Helps to build a complete solution: As we saw, JavaScript is widely used in both client and server-side applications, therefore it helps us to build an end-to-end solution to a given problem.

• Used everywhere: JavaScript is so loved because it can be used anywhere. It can be used to develop websites, games, or mobile apps, etc.

• Huge community support: JavaScript has a huge community of users and mentors who love this language and take its legacy forward.

Javascript Frameworks

React

ReactJS tutorial provides basic and advanced concepts of ReactJS. Currently, ReactJS is one of the most popular JavaScript front-end libraries which has a strong foundation and a large community.

ReactJS is a **declarative**, **efficient**, and flexible **JavaScript library** for building reusable UI components. It is an open-source, component-based front-end library which is responsible only for the view layer of the application. It was initially developed and maintained by Facebook and later used in its products like WhatsApp & Instagram.

Our ReactJS tutorial includes all the topics which help to learn ReactJS. These are ReactJS Introduction, ReactJS Features, ReactJS Installation, Pros and Cons of ReactJS, ReactJS JSX, ReactJS Components, ReactJS State, ReactJS Props, ReactJS Forms, ReactJS Events, ReactJS Animation and many more.

Why we use ReactJS?

The main objective of ReactJS is to develop User Interfaces (UI) that improves the speed of the apps. It uses virtual DOM (JavaScript object), which improves the performance of the app. The JavaScript virtual DOM is faster than the regular DOM. We can use ReactJS on the client and server-side as well as with other frameworks. It uses component and data patterns that improve readability and helps to maintain larger apps.

```
<link reel="stylesheet" type="text/C" her="CSS/bootstrap.min.css">
<script sac="jess/bootstrap.min.js"> </script>

<scripts rc="https://ajax.googleapis.com/ajax/libs/jquery/2.1.3/jquery.min.js">
</script>
```

•   Add the file link to the HTML document and then open the web page using web browsers.

Node

Node.js tutorial provides basic and advanced concepts of Node.js. Our Node.js tutorial is designed for beginners and professionals both.

Node.js is a cross-platform environment and library for running JavaScript applications which is used to create networking and server-side applications.

Our Node.js tutorial includes all topics of Node.js such as Node.js installation on windows and linux, REPL, package manager, callbacks, event loop, os, path, query string, cryptography, debugger, URL, DNS, Net, UDP, process, child processes, buffers, streams, file systems, global objects, web modules etc. There are also given Node.js interview questions to help you better understand the Node.js technology.

What is Node.js

Node.js is a cross-platform runtime environment and library for running JavaScript applications outside the browser. It is used for creating server-side and networking web applications. It is open source and free to use. It can be downloaded from this link https://nodejs.org/en/

Backward Skip 10sPlay Video Forward Skip 10s

Many of the basic modules of Node.js are written in JavaScript. Node.js is mostly used to run real-time server applications.

The definition given by its official documentation is as follows:

?Node.js is a platform built on Chrome's JavaScript runtime for easily building fast and scalable network applications. Node.js uses an event-driven, non-blocking I/O model that makes it lightweight and efficient, perfect for data-intensive real-time applications that run across distributed devices.?

Node.js also provides a rich library of various JavaScript modules to simplify the development of web applications.

1.   Node.js = Runtime Environment + JavaScript Library

Different parts of Node.js

The following diagram specifies some important parts of Node.js:
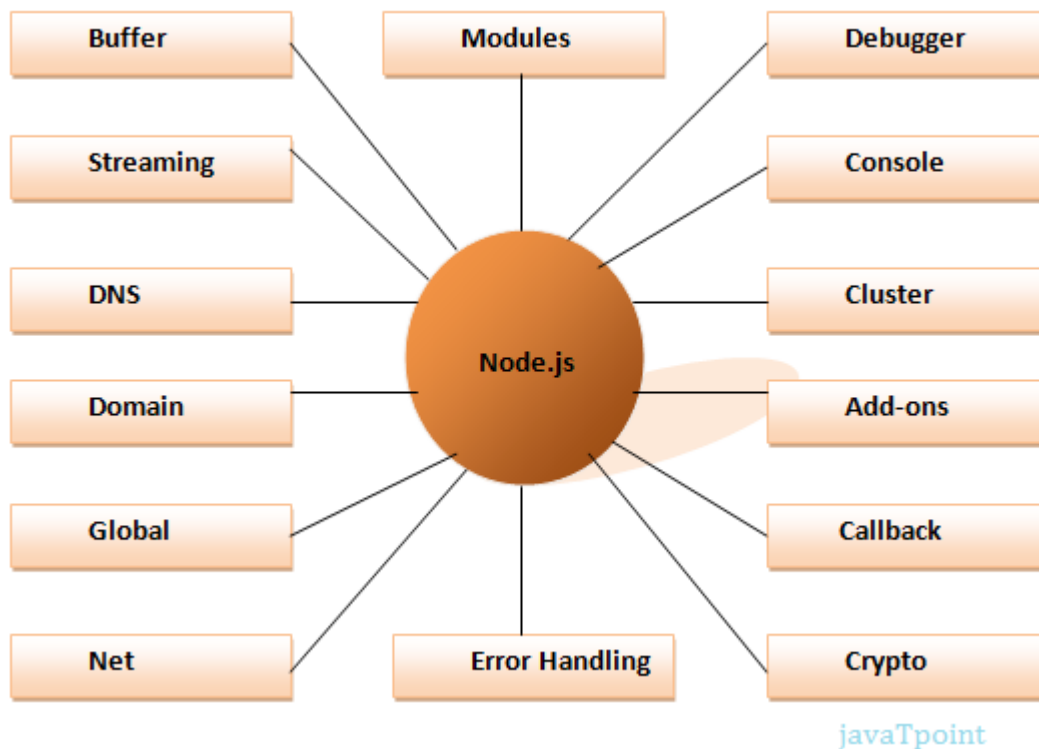

3.1 Features of Node.js

Following is a list of some important features of Node.js that makes it the first choice of software architects.

1 **Extremely fast:** Node.js is built on Google Chrome's V8 JavaScript Engine, so its library is very fast in code execution.

2 **I/O is Asynchronous and Event Driven:** All APIs of Node.js library is asynchronous i.e. non-blocking. So, a Node.js based server never waits for an API to return data. The server moves to the next API after calling it and a notification mechanism of Events of Node.js helps the server to get a response from the previous API call. It is also a reason that it is very fast.

3 **Single threaded:** Node.js follows a single threaded model with event looping.

4 **Highly Scalable:** Node.js is highly scalable because event mechanism helps the server to respond in a non-blocking way.

5 **No buffering:** Node.js cuts down the overall processing time while uploading audio and video files. Node.js applications never buffer any data. These applications simply output the data in chunks.

6 **Open source:** Node.js has an open-source community which has produced many excellent modules to add additional capabilities to Node.js applications.

7 **License:** Node.js is released under the MIT license.

Real-time file sync:
Real Time Synchronization will monitor folders for changes and copy new or modified files with a very short delay after the change has occurred. Because the folders are monitored, they do not have to be scanned – the "Building File List" step does not occur. Real Time Synchronization can be very convenient and speeds up the synchronization process considerably. However, it will only copy new and modified files and it may not be appropriate in all situations.

Real Time Synchronization is chosen in each profile, on the right-most tab sheet among the Schedule settings. The scheduler must be started in a separate step to start the monitoring.

Because Real-Time Scheduling does not compare the source and destination folders completely, it is recommended to also schedule a complete profile run, for example once a day. This can be done on the "Schedule" tab sheet.

Prerequisites and Limitations
This feature relies on real-time change notifications that it receives from the operating system. Therefore, it works only when the storage that you are copying from fully supports such change notifications. For example, local hard drives are usually fully supported. Most file systems also send change notifications over the LAN. But many NAS devices do not send change notifications properly. And sometimes even if the notifications are sent, the operating system may ignore them (such as Mac OS). In addition, change notifications are not sent by servers using an Internet Protocol such as FTP, SSH, WebDAV etc.
However, Sync very 9 can now regularly check Internet based folders for changes. This works best with cloud storages that use a changes-based listing method: Google Drive, SharePoint, OneDrive, Dropbox, and Box. On other storages, Sync very can check the base folder for changes regularly, and scan subfolders if they have new modification timestamps. However, most servers will not update folder modification timestamps correctly across the whole hierarchy, so that a regular full scan would still be necessary. To avoid this, Sync very itself can ensure that parent folder timestamps are updated when it uploads to an Internet server. It will do so in real-time two-way profiles, or if the option "Touch parent folders" is chosen on the Folders tab sheet in the profile. This technique might not work with some types of servers (such as FTP, Amazon S3, Azure – but SFTP is fine). The new behaviour can be chosen on the Real-Time Settings dialog, on the new tab sheet "Internet Folders (Polling for Changes)". The new features are also available as separate options, when you scroll down on the "Folders" and "File Age and Size" tab sheets.
When you see that real-time events are not received and the copying is not triggered as expected, you need to switch to regular synchronization, such as every 5 minutes.

Combining Real-Time Monitoring with a Time Window
You can also combine real-time synchronization with a time window.
Sync very can monitor the folders for changes all day long but do the copying only within the specified time window. To take advantage of this functionality the following settings need to be combined:

- Schedule: no schedule on the Schedule tab sheet
- Real Time Sync selected on the Monitoring/Realtime tab sheet
- Real Time Settings:
- the checkbox "Run profile entirely once" must be deselected

- "Process Complete Folders" must be chosen (on Windows only)
- Weekdays and Time Window:
  Specify the time window when it should do the copying.

To whom it may concern,

This certification proves that **Vanshika Gupta** has completed the internship program at **Protocloud Technologies** as a **Frontend Web Developer**. Vanshika started joining the program from **Thursday, July 27, 2023**, until **Saturday, September 9, 2023**.

During her stay in the company as an Intern, she displayed exceptional enthusiasm, leadership, self-discipline, and self-motivation. Vanshika consistently demonstrated her commitment to learning and growing in the field of Frontend Web Development. Her ability to adapt to new challenges and her willingness to take on responsibilities made her a valuable member of our team.

Vanshika's dedication to her work was evident in her attention to detail and her commitment to producing high-quality code. She actively participated in team projects, collaborated with her colleagues, and contributed to the success of various web development initiatives during her internship.

We are lucky to have had Vanshika as one of our interns, and we are confident that she has a bright future ahead in the field of web development. We would like to wish her all the best in her future endeavors, and we have no doubt that she will continue to excel in her career.

25/09/2024

Sub: Internship Completion

To Whom It May Concern,

I am writing this Internship Complete on behalf of Vishal Mudgal, who has been a valuable member of our team at Digicate EdTech Private Limited as a Salesforce Developer from 10th July 2024 to 10th Sep. 2024.

I am pleased to share my insights into Vishal performance and contributions during his me with us. Vishal joined our team with a passion for creating exceptional user experiences through Salesforce Developer with a commitment for a period of 2 months.

One of the key projects Vishal was involved in was the development of our company Salesforce CRM both Admin and backend. He played a pivotal role in turning design concepts into functional, user-friendly interfaces. Vishal 's proficiency in React, Salesforce , Apex , Visualforce , allowed him to efficiently translate complex features and functionalities into functional components were noteworthy. Although his me with us was relatively short, Vishal work was satisfactory and I am confident that he will continue to excel in his future endeavors.

Sincerely,

Mr. Omkar Vaijwade
